

Improving the Process of Implementing the Brain Care Score

The Global Brain Care Coalition is interested in improving everyone's experiences using and implementing the Brain Care Score in their communities. We would be interested in briefly meeting with you in a one-on-one or group session with other organizations to hear your feedback.

Example questions to reflect on while or after implementing the Brain Care Score include:

1. What's been working so far? What are the pain points and how has the team addressed them? Examples include implementation in the workflow, feedback on the tool, talking about "what's next" after the Brain Care Score, etc.
2. What additional training, support, or resources would have helped you implement the Brain Care Score more effectively?
3. What adaptations did you make to the tool or process to better fit your community or practice?
4. Are people sharing the BCS with other people, and how are they sharing it?
5. What resources are you referring people to after they take the BCS?
6. Is there anything else you would like us to know about your experience using the Brain Care Score?
